

FOR IMMEDIATE RELEASE

New Corporate Headquarters in Addison Texas

April 26, 2016 – Addison, TX - Dean Technology, Inc., today announced its move to a new 52,000 square foot (4,830 square meter) state of the art production and office facility in Addison, Texas. The new corporate headquarters was designed from inception to simplify and optimize production processes, improve worker safety and comfort, and to help ensure a product of the highest possible quality and consistency. The building is also designed to be energy efficient, with LED lighting, smart building automation, and efficient heating and air conditioning. The move was completed in the first weeks of April, and all company operations are at full capacity.

Dean Technology invests heavily on product development, process improvements, and quality enhancements. This new corporate headquarters and factory is an integral part of the company's efforts to continue this into the future.

"Facilities are the core of a manufacturing business. If your space is crowded or out of date, you can't keep up in the market," said Craig Dean, CEO of Dean Technology, Inc. "We spent a lot of time and resources to ensure this new building is the very best, and that DTI is positioned to continue to be a leader in high voltage manufacturing. We have a lot of very exciting new technology that we are working to introduce in the near future, and this new space gives us a great platform to launch all of those new products."

With an extensive new product roadmap, additional production and inventory space will be required. This new building was planned with that expansion in mind, and it will allow Dean Technology to stay ahead of their expected growth. The company is already seeing the immediate benefits of the new facility, and it is certain that this relocation will have continued positive impact on all of its employees, partners, and customers.

About Dean Technology, Inc.

Dean Technology, Inc. (www.deantechnology.com) specializes in the manufacture, distribution and support of high voltage components, assemblies and power supplies. Its three main product lines include HV Component Associates (HVCA), CKE, and High Voltage Power Solutions (HVPSI). The HVCA line of products centers on high voltage diodes, rectifiers, bridge rectifiers, ceramic disk capacitors, and custom assemblies for specific applications. CKE products are a leading line of high voltage and high power silicon rectifiers, MOVs, selenium suppressors, silicon carbide varistors, as well as custom assemblies. The HVPSI

product line includes high voltage power supplies, multipliers and test equipment. Dean Technology's full family of products provides complete coverage of high voltage and high current solutions for any application. For sales and technical information Dean Technology can be reached at +1.972.248.7691.
